

MILK LAW, MODIFIED, GOES INTO EFFECT ON NOVEMBER FIRST

Provisions Subject to Commissioners' Approval
Decided On.

POLICY AT PRESENT,
SAYS DR. WOODWARD

Gives Figures Refuting Statement
That No Applications Are
Coming In.

Subject to the approval of the Commissioners the Health Department today announced that it will put into effect a milk law November 1, which contains the following provisions:

All farmers holding permits from the District Health Department will be required to submit new cows introduced into their herds to the tuberculin test.

All permits applied for after October 1 will not be approved until the farmer submits his cattle to the tuberculin test.

All producers holding permits from the District Health Department must allow their herds to be tuberculin tested on suspicion that any of their cows are suspected of having tuberculosis.

tributable to a better milk supply, Dr. Magruder said he believed the milk conditions were the biggest factor. "That water was not a potent factor, he said, was proved by the fact that the installation of the new filtration plant was not followed by the marked decrease in the typhoid and malarial fever cases that had been expected."

Another ground of this statement, the physician said, was the high mortality rate of the summer of 1909. "The mildness of the winter of 1908-9, he said, resulted in depleting the ice supply so that milk during that summer was shipped into Washington without being properly cooled."

"Milk is one of the most prolific sources of typhoid, scarlet fever and tuberculosis," Dr. Magruder said. "These experiments in Washington have been of great profit to scientists throughout the world."

Europe in Line.

Dr. Magruder left with the committee evidence that regulations governing the milk supply of European countries were modeled after those of Washington. He also presented to the committee a copy of the pamphlet of the royal commissioners of Great Britain, in which they endorse the work of Dr. W. S. Schroeder, of the Bureau of Animal Industry.

A copy of the order issued in England in 1905 forbidding the sale of milk not taken from tuberculin tested cows or sterilized, was filed with the committee.

"The day of 8 cent milk has gone," said Dr. Magruder, in concluding. "The time has come when the consumer should be expected to pay a portion of the expense of producing pure milk. Nine and 10 cents will be the price paid for milk in the future."

There should be no reduction of the retail price of milk in the summer, he said. Magruder's belief. Then the increased output is more than canceled by the higher cost of shipping, since ice is needed to keep the milk cool.

Producer Gives Figures.

Members of the committee put a number of questions to Mr. Saunders after he had given figures on the increased cost of producing milk.

"The temperature requirement and the tuberculin test are the two main objections the farmers have to the Health Department regulations," the speaker said.

Mr. Saunders said he wanted it to be understood that he was in no way antagonistic to the Health Department, nor did he wish his remarks to be construed as an attack on the department.

"We cannot expect to have a portion of the expense of producing pure milk. Nine and 10 cents will be the price paid for milk in the future."

There should be no reduction of the retail price of milk in the summer, he said. Magruder's belief. Then the increased output is more than canceled by the higher cost of shipping, since ice is needed to keep the milk cool.

Permits Asked For.

The Health Office records show that the permits asked for since October 1, and the cows represented by these permits are as follows:

Producers, cows.	No.
Maryland	10
Virginia	10
Ohio	11
Pennsylvania	43

The large amount of milk now coming to Washington from States hitherto considered too far off for easy access to the dealers of the Capital is shown by the large number of permits asked for by Pennsylvania and Ohio shippers.

Action on the tentative agreement reached by the Health Department and Representative C. C. Carlin, who conferred with Dr. W. C. Woodward yesterday on behalf of the dealers, will be deferred until the return of Commissioner John A. Johnston from New York, on Monday.

This announcement made today will give the Health Office ample time to prepare the detailed plan which he hopes to present to the Commissioners on Monday.

**MILK REGULATIONS
REDUCE MORTALITY**

"Washington leads the United States—yes, the world—in progressive regulations regarding its milk supply."

"The result of these regulations has been to reduce the infant mortality rate from 124 in every 100,000 to 33 in every 100,000."

"The work of Dr. C. Woodward has been recognized by great physicians of several European nations as a great service to the problem of regulating the municipal milk supply."

These statements were made by Dr. G. Lloyd Magruder, one of Washington's authorities on tuberculosis, before the Chamber of Commerce yesterday afternoon.

The committee also heard Fred C. Saunders, a Virginia producer, who threw some interesting sidelights on the situation in answer to questions put by the committee, and A. S. Trundle, of the Milk Dealers' Association.

Mortality Statistics.

The most striking portion of Dr. Magruder's talk was data regarding the relative infant mortality during periods when milk regulations were enforced and years before much attention was paid to the supply.

"Before 1905 the general death rate from typhoid, malarial fevers, etc., was abnormally high," Dr. Magruder said. "After that year, which marked the first attempt of the Health Department to clean up the farms sending milk here, the rate took a sudden drop."

"After 1905, the year in which a more thorough system of inspection was inaugurated, the improvement was even more marked. From 194 deaths in every 100,000 babies under five years from diseases communicable by bad milk in 1904, the rate fell to 170 deaths after the clean up of 1905. The rate continued lower until it reached ninety-two deaths in every 100,000 in 1906, and by 1907, when the Health Department had completed a system of universal inspection, it fell to seventy-two in every 100,000."

"In 1909 the rate reached the lowest ever attained in this city," said Dr. Magruder, "which was an average of thirty-three and one-fifth deaths to every 100,000 babies."

Milk Biggest Factor.

In answer to questions of J. Louis Willie, chairman of the committee, as to how much this improvement was attributable to a better milk supply, Dr. Magruder said he believed the milk conditions were the biggest factor.

"That water was not a potent factor, he said, was proved by the fact that the installation of the new filtration plant was not followed by the marked decrease in the typhoid and malarial fever cases that had been expected."

Another ground of this statement, the physician said, was the high mortality rate of the summer of 1909. "The mildness of the winter of 1908-9, he said, resulted in depleting the ice supply so that milk during that summer was shipped into Washington without being properly cooled."

NEW DUTCH MARKET GIVES A RECEPTION

Branch at Seventh and Q N.
W. Opens for Business
Tomorrow.

Old Dutch Market, Inc., opened its fourth and best equipped Washington market at noon today for the reception of the public.

The new store, at Seventh and Q streets northwest, had just been completed, but the first visitors found it not only decorated with chrysanthemums and autumn leaves, and entwined by an orchestra, but fully prepared with the goods that will be offered at the souvenir bargain sale at 6 o'clock tomorrow morning.

Meats and fish were displayed in the glass refrigerators, just as they will be shown, tomorrow and prospective patrons were favorably impressed with both the wares and the ways of handling.

Today's Reception.

The reception, which began at noon with the incoming of numerous visitors already waiting at the doors, will last until 9 o'clock tonight, when the doors will be closed until the opening sale.

Members of the corporation stated today that their new market could not be excelled in the whole country. It is installed in a beautiful building of Dutch architecture and finish, the exterior being of red brick and tile, the interior of white tile and Flemish oak. But the mechanism and devices for the business of the market, the owners say, are altogether modern American of the best and latest patterns.

Hosts at Banquet.

The proprietors of the Old Dutch Market, Messrs. Whitfield and Casley, were hosts last evening to a half hundred Washington business men, who gathered in the rathskeller-like basement of the new branch store to attend a banquet.

The guests included Health Officer Woodward, newspaper publishers, and a number of meat and produce merchants of the District.

The banquet was entirely informal. All the guests wore large butchers' aprons, and, during the evening, posed for a group photograph in this unique garb. A number of small tables had been placed in the attractively arranged basement of the new store and around these the guests assembled in threes and fours, while sandwiches and other edibles fit for any connoisseur were passed about.

During the informal banquet Proprietors Whitfield and Casley were toasted, their enterprise praised, and the unique and sanitary plan of the new market place was favorably commented upon by every speaker.

**COLONEL IN AUTO
NEARS TOUR'S END**

Discards Special Trolley and
Train on Last Lap of Stimson
Trip—Is Pleased.

UTICA, N. Y., Oct. 23.—Special trolley car and train were discarded by Theodore Roosevelt today on the last lap of his week of campaigning for Henry L. Stimson, Republican candidate for governor of New York.

He left here in an auto for Rome, his itinerary from that point taking in Lyons, where he will arrive late in the day, and Rochester, where he speaks tonight.

Colonel Roosevelt is glad his tour is near its end, as the strain on his throat has been heavy. He is confident, however, that great gains have been made for Stimson, and believes that the attack made against John A. Dix, the Democratic candidate, and Wall Street will bring success in the election.

The ex-President will leave Rochester on a midnight train, and on his way back to New York will stop off tomorrow at Kingston to make a speech. He gets to New York tomorrow afternoon and will speak in Brooklyn and at Mineola in the evening, going from there to Oyster Bay.

**TAFT IS PRESIDENT
OF THE BOY SCOUTS**

President Taft is now honorary president of the Boy Scouts of America, which numbers 150,000 boys from forty-six States. President Taft now holds the same relation to the movement in America as does King George in England. President Taft's letter accepting the honor of presidency was made public at national headquarters in New York last night.

One True Medicinal Whiskey

Beware of imitations and substitutes unscrupulous dealers tell you are "just as good as" Duffy's Pure Malt Whiskey

These cheap concoctions are foisted on the people with the intent to deceive by dealers mindful of their profits only and caring nothing for the health of their patrons. Some go so far as to try to make you believe it is Duffy's Pure Malt Whiskey.

Substitutes Are Dangerous

When a remedy has been before the public for more than half a century, has been prescribed and used by the best doctors and in prominent hospitals, and has carried the blessings of health into as many thousands of homes as Duffy's Pure Malt Whiskey has, imitations are bound to arise. But they can imitate the bottle and label only—no one can imitate the contents.

Duffy's Pure Malt Whiskey Is Beneficial

It is an absolutely pure distillation of malted grain. Its palatability and its freedom from injurious substances render it so that it can be retained by the most sensitive stomach. It has been used with remarkable results in the treatment of consumption, pneumonia, grip, coughs, colds, asthma, malaria, low fevers, stomach troubles and all wasted and diseased conditions.

The genuine Duffy's Pure Malt Whiskey is sold in sealed bottles only. The "Old Chemist's Head" is on the label and over the cork is an engraved seal. Be certain this seal is unbroken. Sold by druggists, grocers and dealers everywhere or direct, \$1.00 a large bottle.
